There is increasing awareness of the benefits of exercise, and patients are seeking cardiac rehabilitation programs. We reviewed the medical records of 136 consecutive patients (99 men, 37 women; mean age, 57.6 +/- 10.8 years) who were referred to the outpatient cardiac rehabilitation center of The University of Tennessee College of Medicine in Knoxville. Patients were followed for 1 year. Inappropriate referrals (32%) were characterized by the following: the potential need for surgical intervention had not been addressed; the patient had not been given a diagnosis of ischemic heart disease; and the patients had not been referred by their physicians. [Hematologic changes in acute and chronic poisoning with a combination of methemoglobin and hemosiderin]. Two cases of acute poisoning with a combination of Methemoglobin and Hemosiderin are presented. Both patients presented with the signs of a methemoglobinemia and a hemosiderinemia. With the results of the chemical analyses of blood, both diagnoses were verified. However, the clinical picture of these poisoning cases was much more complex. In the first case, the acute methemoglobinemia produced a severe arterial hypoxemia that needed an exchange transfusion. In the second case, the iron overload induced a hemolytic anemia with severe clinical manifestations. On the other hand, the combination of methemoglobinemia and hemosiderinemia, as well as their combined evolution, are little known. This combination can be observed in some blood disorders (hemoglobinopathies, sickle cell disease, and thalassemias) and also in the undernutrition syndrome due to the anemia of chronic disease. The cases that have been reported until now were mainly associated with thalassemia. The cases presented here add one more case to the list and emphasize the clinical complexity of these patients. What's New In AutoCAD?

You can now import a new file format into the drawing without first opening it, and even include your changes to that file while you're drafting. When you finish the drawing, it automatically converts to that format for you. (video: 1:32 min.) Markup Assist can help you create clean and precise, professional-looking drawings. Search or browse through your computer to find a desired style, select a shape, and choose a color. Then, simply choose one of the available fill or outline styles. (video: 1:35 min.) Use the Markup Assist property in your drawing to keep your drawing organized and easy to understand. Set the Markup Assist style to first, then use the Markup Key on your keyboard to create a key symbol for the drawing. (video: 1:12 min.) Newly added elements now appear in the context of their parent. When you create new objects, you can now place them in the same context as their parent and siblings without leaving the drawing. (video: 1:08 min.) You can now share a link to a drawing that is open in your browser, with a link to include a drawing property in the web address. For example, you can create a hyperlink to your drawing by simply pasting its URL in a text field. (video: 1:40 min.) If you've ever worked in multiple drawings and need to create a new sub-document, the New Sub-Document command is now much easier to use and learn. Just select the first drawing in your list of drawings, and you can create a new sub-document with a single click. (video: 1:44 min.) You can now open your drawing in a browser window by using the Open in Browser command. You'll be directed to the drawing view in your browser and can continue working in that window. (video: 1:14 min.) Filtering: Visual filters for smoothing the lines and shapes of your drawings while retaining the edges. (video: 1:26 min.) Eliminate the ambiguity that often exists when editing a drawing's AutoCAD layer properties. You can now have one AutoCAD layer (or view) show all geometry of that type, and have other layers or views show only specific objects. (video: 1:44 min.) Eliminate the visual clutter
