AutoCAD is one of the world's leading 2D CAD software programs. According to Gartner, AutoCAD is the world's leading 2D CAD software. History AutoCAD was originally developed by Arnoldo Lamego, who worked on the software with his partner, Hugh VanStone, in Montreal, Quebec, Canada, in 1980. The company was named Grumman Calcomp, and was acquired by Autodesk in 1998. AutoCAD history timeline 1970s 1980s 1990s 2000s 2010s 2020s Features AutoCAD is a very extensive application, with over 400 functions and features. Below is a list of major features available in each release. Add-ons Add-ons are programs that work with AutoCAD; they are available to purchase as part of the AutoCAD subscription. Add-ons include landscape, lighting, animation, drafting, CAD visualization, BIM, and visual effects. AutoCAD has many basic and professional features, as well as technical functions, common drawing features, and drawing templates. The Add-ons/Autodesk Apps category (Autodesk® AppCentral) also has applications for mobile devices that can be used instead of AutoCAD. AutoCAD LT AutoCAD LT (formerly AutoCAD standard) is a low-end AutoCAD license option. It is available in a few different editions, from the Classic LT to the one that includes a subscription to the same application plus unlimited free cloud-based services. Autodesk in 2015 announced a development of the low-end version AutoCAD. The new product is intended for the domestic market and is based on the AutoCAD standard and LT versions. The application was presented at the International CAD Fair (CAD-OF). AutoCAD is the basis of AutoCAD LT. It is more basic and suitable for light drafting purposes. Like the full version, the software can be purchased as a standalone application, as part of the subscription, or on a shareware basis. It also can be used as a cloud-based application. In AutoCAD LT, the basic functions are grouped together in the Workspace, whereas in AutoCAD there are five Workspaces. In AutoCAD LT, only Layer Functions, Path Tools, Chord Connectors and Arc Tools are available, while in

This disclosure relates generally to digital image editing and, more particularly, to selectively recoloring images. In the field of photo editing, people often edit their photos to emphasize certain features, remove objects, etc. However, conventional image editing techniques are often time consuming and require complex editing techniques to correct for problems. It is desirable to have improved techniques for editing photos. It is also desirable to have improved techniques for detecting and recoloring objects that appear in images. The headings provided herein are for convenience only and do not necessarily affect the scope or meaning of the claimed subject matter. In the drawings, the same reference numbers identify identical or substantially similar elements or acts. To easily identify the discussion of any particular element or act, the most significant digit or digits in a reference number refer to the Figure number in which that element is first introduced (e.g., element 204 is first introduced and discussed with respect to FIG. 2). A portion of this disclosure contains material to which a claim for copyright is made. The copyright owner has no objection to the facsimile reproduction by anyone of the patent disclosure (including Figures), as it appears in the U.S. Patent and Trademark Office patent files or records, but reserves all other copyright rights whatsoever. This invention relates to the fabrication of semiconductor devices, and more particularly to a method of making a carbon/silicon carbide composite. A wide variety of methods have been employed to form silicon carbide from a silicon source material. Various known methods include a method of forming silicon carbide by reacting silica with carbon in the presence of an electrical discharge as disclosed in U.S. Pat. No. 3,847,851; a method of forming silicon carbide by reaction of a silicon and a gaseous carbon-containing material as disclosed in U.S. Pat. No. 4,058,432; a method of forming silicon carbide by reaction of silicon and a hydrocarbon, e.g., methane, in the presence of carbon as disclosed in U.S. Pat. No. 4,038,065; a method of forming silicon carbide by reaction of silicon with carbon monoxide in the presence of an inert gas, e.g., argon, as disclosed in U.S. Pat. No. 4,089,772; and a method of forming silicon carbide by reaction of silica and a mixture of methyl chloride and methane as disclosed in U.S. Pat. No. a1d647c40b
