## What's New In AutoCAD?

AutoLINK: Place layers in your drawing and AutoCAD will automatically create invisible layers for each element—equivalent to the new Outline command. With just one click, AutoLINK makes it easy to document your work and quickly share information. (video: 1:26 min.) Linked Styles and Layers: Create linked styles, which automatically apply to all elements with the same style. The linked style can be used to save time, achieve consistency and work efficiently. You can apply or edit linked styles in a single dialog. (video: 2:34 min.) Smart Layer Control: Now you can quickly create and switch between named layers and grouped layers. AutoCAD now remembers all the layers that you have assigned to a particular drawing, and you can move them to another drawing in a single command. (video: 1:25 min.) Under the Hood: Revised rendering engine that can deliver much faster rendering times. Revised 3D engine for improved model-view-projection modeling. Revised Grass engine and Advanced Terrain engine for improved modeling of natural and man-made surfaces. Enhanced shadowing. New text editing tools, including layout tools. Raster imagery filters. Envelope controls for breaking out of precision and tolerances. Support for easier 2D and 3D communication. More automated import and export capabilities. Saving and loading changes. Simplified CAMTOM import. Revised drawing properties, including time-stamp properties and tag properties. Simplified export dialogs, including support for the Export DWG/DXF Settings option. Configurable toolbars and customizable tooltips. Improved modeling of surfaces and parametric objects. Improved linework support. Revised state machine. Revised spline modeling. Revised block display. Multiple-instance support. Improved layer management. Geometric data capture. Revised metadata capabilities. Revised image editing tools. Revised command selection.
