View Poll Archives Star Wars Episode VII Teaser Trailer Available! Posted Thursday, April 9, 2009 4:57 PM by Justin Mond Nearly two years ago, I saw and loved the original Star Wars trilogy in the theater for the first time ever. I didn't expect that the next time I would see a Star Wars movie would be 15-20 years later, much less a new trilogy (7th one). So imagine how excited I was when the teaser trailer was shown at the Star Wars Celebration VI convention center last weekend. It brought a smile to my face, mixed in with a little pity for the fact that the movie I will be waiting for when it premieres on May 4, 2013 is the first in a new trilogy. It left me very excited to see the whole thing unfold before my eyes. In case you haven't seen it yet, the teaser trailer is included below. I have and I will keep updating this post as the film comes closer and closer. A new study gives researchers a better understanding of how the structures of the viruses that cause many common diseases work, and might make them easier to fight. It's not unusual for RNA viruses - which include viruses that cause a wide range of diseases, from smallpox to Ebola - to adopt complex shapes. But a new study by the University of Maryland School of Medicine has uncovered how the RNA hairpin that contains the genetic code of the polio virus is twisted into a unique structure. Up until now, scientists had thought the structure was relatively simple, the result of a series of base pairings. But the study, published in Nature Structural & Molecular Biology, puts the idea of a virus
