## AlligatorSQL Business Intelligence Edition Crack

AlligatorSQL is a database Management System that aims towards simplicity, flexibility and availability of its administration. According to the AlligatorSQL architecture, no database is single. AlligatorSQL is constructed of a Server, an administration server and several AlligatorClient applications. AlligatorSQL consists of the same programs which are used in any other database server, namely: -- DBMS (Database management system): AlligatorSQL Enterprise Edition supports 7 different DBMS: Oracle 8.1, 9.0, 9.2, 11g, SQL Server 2000, MySQL, Ingres and PostgreSQL -- Client (client application program): AlligatorSQL Client is the front end to any of the databases supported. AlligatorSQL supports Microsoft's Windows and the Macintosh versions of the operating systems. -- Web server (administration server): AlligatorSQL supports the Internet which means that it is possible to use the administration server in a remote manner. It is also possible to access the web server via local network from any computer using a web browser. It means that it is possible to add, modify, delete or create users. -- Client (AlligatorClient): AlligatorClient is the database client. It means that it is possible to work directly with database through a standard GUI. -- Server (AlligatorServer): AlligatorServer is the Database server and database access programs. It provides access to database tables through ODBC, JDBC, Interbase and others. It supports a number of connection technologies such as OLE DB, XML DB, ASE, IAS, JDBC, ODBC, ADO, ADO NET, ADO, ADO JET, and Data Connectors (ODBC, ADO, ADO NET, JDBC, IAS). -- Client Plug-in (AlligatorPlug-in): AlligatorPlug-in is the Database application extension module. It is possible to develop add-on plug-in modules for any database. This Plug-in may for example use plug-in modules written in Java, PHP, .NET or other programming languages. AlligatorSQL Business Intelligence Edition Key features: A. Database Management System 1) High availability and reliability. The technology that we used to make our database server is based on recent operating systems, high performance, high availability software.
