BabyMBeats Features: -Heart rate -Breathing rate -Activity level -Notification of loud sound. -Music or vocal therapy can be set -Multiple modes to be selected, such as favorites, alarm, or sleep -Wake up the baby -Sleep times can be set -Abnormal movement detected -Life and Health alerts A major problem faced by most people that have pets is keeping track of their spending. Smartlock is an extremely simple application that allows you to monitor your pet's spending in real time. By using the filter tools in 09e8f5149f

Home Eye Crack +

===== Remote monitor and control your home from your mobile device Home Eye is a free application for Android devices and a desktop web interface that gives you the ability to connect, remotely view, and control video of your home via your smartphone, tablet, or computer. With this application, you can look in your home and observe what's happening even if you are not home, with the advantage of sending you a notification whenever someone enters your home, along with the video snapshot that captures the event. Home Eye allows you to take video snapshots of activities or accidents that happen within your home. Every time your device receives a notification of movement, a video snapshot of the activity will be captured. Home Eye also works with your smart home devices, so that you can program notifications to be sent when your devices detect movement. This will allow you to see what's happening remotely. Home Eye includes a few convenient features including scheduling of camera recordings, image capture via the notification system, notification messages, live webcam monitoring, and more. This software will turn your spare Android phone, tablet, or computer into a totally functional home security system, complete with push notifications, image capture, and recording. Home Eye Features: ===== Remote view, control and monitor your home from your mobile device, anywhere on the world. Control your Smart Home devices remotely from anywhere in the world. Get notifications when someone enters or leaves your home. Full access to your recorded images and videos. Automatically create timestamped snapshots of your recorded images and videos. Schedule your camera recordings and notifications. Automatically record a notification video whenever someone enters your home, sends you a text message, or uses a smart phone app with the notification system. Watch live webcam images. Notification of false alarms and recorded video snapshots Enable and disable the video recording during different time frame, and turn it on and off at specific times of the day Adjust the microphone sensitivity. Remote access via your spare mobile phone, tablet, laptop or computer, anywhere in the world Settings that allows you to control your home settings from your mobile device Read the notification message, send it to your mobile device, or delete it. Read the recorded notification video, or just view live webcam images and videos of your home. Remotely access your recorded images and videos. Easy setup, no registration Daily Themes, Notification and Record Mode Motion detection Recording of trigger events:

The BitChute is a cloud video platform and content delivery network. BitChute has been in development since 2014. It was created and designed by a team of makers and developers from all around the world to empower independent media creators and viewers with a free and open system to share their media. BitChute has its roots in the decentralization movement. The concept of decentralization was first introduced to an ad-funded online news media by the BitChute team, and was later adopted and used to create a new social network. Started out as a team of independent developers, the BitChute team now consists of professional video editors, content makers, educators, and developers. BitChute is still a decentralized project where the community shares content production with each other and the team members. However, unlike decentralized projects, the team members of BitChute are paid. BitChute has its own VOD (video on demand) platform and maintains a decentralized streaming network. The content is public and open access, and the goal is to give content creators an alternative to paywalls and proprietary platforms. BitChute is a platform which allows everyone to contribute and enjoy. It is free to use, unlike any other video streaming platform available in the current marketplace today. BitChute is free and open source. The community itself is free to use, free to download, and free to replicate. With the recent release of the SDK, the BitChute application is in development, which will provide a more
