_fmt.jpeg) Photoshop's latest program, Photoshop CS4, is an advanced version of the program. If you are a beginner, consider Adobe's earlier version, Photoshop CS3. (Photoshop CS4 is not yet available, but you can use the free, older version—that's essentially a beta version—if you are a beginner.) ## Understanding Layers To achieve the best results in a digital image, you need to master using layers, which are a method of organizing digital images in layers. As you learned in Chapter 2, images are broken up into different layers for various purposes and effects. In Figure 6-6, the layer named Window Borders (background) is set to an opacity of 100 percent. FIGURE 6-6: When you view a layered image in Photoshop, you can see individual layer windows, including the Background and Drawing layers. Photoshop has three basic layers: Background, Drawing, and Window Borders (background). The Background is the layer that appears directly under the canvas at the top of your image. It's the background for your photo — the layer you're working on, or the canvas in this case. You can see that the Background layer contains the sky and tree in the image, as well as a light blue fill for the window. The Drawing layer is the layer you're drawing on. These are the lines of strokes, the shaded sections, or the areas you want to fill in. Finally, the Window Borders layer (as shown in Figure 6-6) is the backdrop on which you place your artwork, creating the effect of a white window. So if you draw in the window, that window is actually behind the Window Borders layer. To create a new layer, click the New Layer button at the bottom left of your workspace. Alternatively, you can select the New Layer icon from the Create New Layer menu, as shown in the margin. As you create new layers, you can see in your Photoshop workspace a number of new layers in blue, such as the Window Borders layer shown on the left in Figure 6-6. There's a good reason that these layers appear in blue. When you deselect the Background layer, as seen on the right in Figure 6-6, Photoshop creates a new image — a new layer — and fills it with black. ## Using Basic Photoshop Editing Tools These days, Photoshop is a powerful but sophisticated program. But you can still use some

What's New In Adobe Photoshop 2022?

To summarise, the "Sociometric" phase was a three-week follow up on the training, during which participants were asked to complete a questionnaire online and wear a badge that collected data about their running behaviour. The "Adherence" phase, involving a final 6-week follow up, consisted of three visits to the lab. Two runs were conducted on a treadmill to ensure that the participant was able to replicate their training behaviour in a lab setting. Then, at the final visit, participants were fitted with the same accelerometer and GPS device that they had worn during training. Shunted at the end, this should be a long way ahead of the GWRP project. For example, Shunted have made their system free to use by organisations within the Mind Body Wellbeing Network – they just require the 'Hubs' to install the GWRP app and any devices provided. The challenge for this study was that the research team did not want to interfere with the participants' daily life and modify their behaviour. Therefore, rather than simply handing the participants a load of gear, the researchers went about it the other way around. In the lead up to the final six week period, a small amount of equipment was collected and the participant's home environment was set up to familiarise the participant with the equipment. For instance, the participant might have been shown how to wear the GPS and respond to a message on their smartphone. The final measure of adherence was simply measuring how successful participants were at replicating their behaviour they had learned in the four-week training phase. The data suggests that while the participants themselves weren't really all that keen on running in the long run, they certainly found that both the accelerometer and GPS provided tangible feedback that they could access instantaneously. In short, for example, if you missed a run or didn't run in the morning, the device would alert you to it. As the training progressed, the researchers found that the GPS device kept a better record. For example, the GPS watched their movements over time and the devices would flag any periods of inactivity that might have occurred when

they were watching a movie with friends. It is thought that this might be because the GPS is so capable at tracking movement, whereas the accelerometer on a smartphone is only a proxy for how much you've been running. However, the device wasn'
