Autograph is a comprehensive and lightweight mathematical graph generator and a textbook for engineering students. It is a real-time calculator which produces mathematical graphs at the touch of a key Autograph is an attempt to relieve engineering students and math lovers from the laboriousness of writing conventional math books. It allows you to produce graphs with a single touch. It is a comprehensive mathematical graph generator that allows you to produce impressive math graphs and shares them by e-mail. It is a free to download app that uses no additional software. Autograph is a calculator that allows you to rapidly produce mathematical graphs without any intermediate calculation. Autograph is a free to download app which produces the following basic mathematical graph shapes. This is a grid of lines that represents the Cartesian plane. This graph shows a surface area, or a volume of a three-dimensional object. The area of this graph is zero. Evaluation of the area is possible by

using the tool Plotting a graph line in this application is done by touching the image of the curve, and the position where you click will be the starting point of the curve. You can also set the graphs background color by tapping it. Functions and Matrices can be created to solve problems. The application is capable of evaluating trigonometric, exponential, logarithmic and inverse functions. The application also allows you to convert the function from any base to any base. It also allows you to evaluate a function with more than one argument. This application is a very useful invention that will help you create your own mathematical diagrams very fast and easily. This is a new version of the application and features are listed as below. Many users experienced problems of installing Autograph in their Android devices. Can we see the exact character vector which is expected by regression function?Is it first data point? We can print exact character vector [17, 37] along with regression function in graph. Only one value will be plotted if regression function is of one line.What if it can be multi line? The regression function will be displayed by axis label in multi line graph. I couldn't find any graph command in the help.Is there any way to use any command? We can use plot command to display a graph along with regression function. The data were already fitted in the line by using regression function is there any way to change the line to another line? Yes, we can use a new regression function and add it to the model. # Calling Line ---> regress function # data$resid ---> residuals # data$count ---> count of obs # data$condf.resid ---> condition number of residuals The condition number is practically a measure of how reliable is a statistic based on the variance-covariance matrix of the given regression residuals. It is basically used as a measure of the sharpness of the regression model. Lack of understanding of why regression coefficient is important for students is a common cause of failure in statistics. Students are expected to learn only about univariate and multivariate regression analysis. They are never taught about concept of effect in multivariate analysis. Effect is nothing but the projection of treatment variable and control variable on predicted response. For example, when we have two inputs, a and b, and one response y, an effect is given by a_b. The regression coefficient is the effect that we get for each unit increase in one input on the predicted response. If we want to find the effect for the treatment variable on the predicted response, we can multiply each effect with its corresponding input and obtain an overall effect. For example, if the effect of treatment b is 1, that means a unit increase in treatment b increases the predicted response by 1. The line of effect has nothing to do with standard deviation. Hence, it is not possible to predict what variation in response will be due to a unit increase in treatment, if we know only the standard deviation and no more. If we know no more, then we can predict a range of variation in response. However, the regression coefficient will give the exact point at which the
