“This is a really sophisticated technology. It is the first time we have been able to go beyond the area where we can estimate player movement with machine learning,” said Peter Moore. “Instead, we have been able to get the feeling of how these players move during a real match, which will have a significant impact on gameplay. We’ve just started to experiment with the technology and we are learning quickly.” How it Works FIFA 22 will feature a mix of new, updated and added gameplay mechanics and features, including the use of HyperMotion™, AI Catching and a new Kick-Off feature, which will enable players to take control of the ball from the kick-off by pressing the B button. The player will then be able to use the same B button to place the ball into play. All of these gameplay elements together will empower players to use the ball in every way imaginable to shape matches. FIFA 22 also introduces two new user-generated modes of gameplay - Real Club 1.0 and Carefree Mode. In Real Club 1.0, the data from the players’ gameplay matches will be used to create the most realistic club experience in the franchise, with a match-day atmosphere and access to the players on their own team. In Carefree Mode, players have free reign to play matches in a relaxed setting, either for pure gaming fun or in preparation for the actual match. Carefree Mode also includes a feature called “Big Shots”, which gives the player the ability to save their games at key moments throughout the match and return to them with a saved team and settings. Players can choose to adjust the settings to suit their preferences for controls, camera angle and audio level.
