What's new in Summoner VR:

: The Assassin's Loose Money (Warning-Due to the TL;DR nature of the description this chart may become somewhat long) This is our first defensive series, reminiscent of the Street Fighter Pro Tour series. Tactics Maiden sees and predicts each and every action of your opponent, in real time, to plot the best course of action for you. The Assassins are members of a special unit within the nation of Kyuki, they are known as the Teiel (Which has been romanized several different ways) and they have the unique ability to observe the passersby with their mind and use their behavioral pattern insight to take care of them with a shock of the blade. One of the Teiel takes great pride in their service to Kyuki but really only cares about earning their daily coffee at the temple. The other Teiel is pained by what's happening, but they do nothing. How do we treat them? From what I've seen and have experienced working in the Teiel ranks, is that it's an incredibly difficult job, but the pay is better than most other things you could do, although it does depend on your lack of interest in shaving off the bristles of your eyebrows. You use your abilities to determine the behavioral patterns of each and every person in your area, so you go up and down and side to side, thinking about people, thinking about the city, thinking about yourself, thinking about strangers, thinking about the world, thinking about how they think, thinking about how you think. It's a terrifying occupation, being that lone killer. I'd like to share with you all, my opinion on Tactics Maiden, which is both my bias and my opinion. Many of the reviewer's have had a lot of experience with this game, as more than a few of the original reviews were written by your's truly. From memory, the game was released to both the PSP and PS3. The game was fairly popular upon it's release, it has an impressive rating of 59/100 on Metacritic, with generally a mediocre to poor rating on certain media outlets such as IGN. However, all in all it's a solid game, and certainly fans of anime tactics games will appreciate it's character and tone. The game features a open world, and in-depth character customization, with many of the main character's being voiced by voice actors

I'd like to ask a question on Meta (should it go there, or in Unix & Linux) about a discussion in a chat room. The room is 'friendly' for all types: new users with both recent questions and long-time users are welcome. I recently posted the question in the main site chat room (on MSE, because I prefer it), and many people seemed to think the question would be an interesting and useful addition to the site. I went ahead and added my question to the main site chat room because 'somebody' asked me (see my recent comment) - but others were negative. I checked the accepted answer to the question under discussion, and found no mention of it - that's why I'm not exactly sure how to interpret the answer. I could be wrong (I'm new to MSE), but I suspect that the voting and voting patterns on both the chat and main sites are not necessarily in sync.
