Here's a video showing EA's chief game designer David Rutter demoing and explaining how HyperMotion technology works in FIFA. The entire video is worth a watch but here's an interesting snippet starting at 6:57: The storyline within this video is that, by collecting data from 22 matches, EA Sports has re-created the action in FIFA 22 to make it more realistic and intuitive. It's worth noting that FIFA 22 is actually the 17th game to use this type of physics technology. This has actually been done for at least the last five years. Last year, FIFA was one of the first sports video games to use MotionKinect technology to provide more accurate on-field decisions. Using data, FIFA simulated a match based on what a real-life referee would have done. The result was a more balanced and interesting game. This year, EA Sports again is integrating motion capture data to provide more accuracy in gameplay. As you would

---

expect, this comes at a cost. While 20 years ago, games might have cost up to \$300 million to make, now these types of games can be made for around \$40 million. “We started about 13 years ago with Madden NFL, but we’ve seen exponential improvements in the last five years,” said EA Sports general manager Aaron Weierman. “We’ve just not made enough strides in the last two years.” Although the basic gameplay logic is the same (kick, pass, tackle, pass, pass) the adjustments and innovations that are made help make the game more enjoyable and enjoyable to play. Here’s a video showing how the new Replay function works and how the more responsive AI will make for more varied matches. The whole video is worth a watch but this is a good starting point. FIFA 20 AI & Skill Matching We saw this in FIFA 19, but this year we’re getting more nuanced scripting. “AI we call thinking, which leads to the ‘Think’ system,” EA Sports’ senior game designer David Rutter explained. “You can

---

tell our AI is thinking by how it moves and communicates in a way that's unrehearsed. It's not scripted. You see that in their interaction with other players in a way that's more natural.❖

The Original Creator Of The Game FIFA is the first soccer game developed in an entirely new way. It started life as a project designed by Peter Rits by fewer than 10 people in an office right next door to EA's first home: 1632 Broadway in San Francisco. In the earliest days, the game had a rag-tag team of programmers, artists and designers, alongside a number of amateur players.

---

Soon, EA Sports approached Peter Rits and told him they wanted to turn his vision into a videogame. Without a publisher to guide him, Peter invested his life savings to build the foundations of a new creative studio: EA Canada. FIFA was born. Over 30 Years Of Innovation And Passion Today, EA Canada, now a part of EA Sports, is still dedicated to the FIFA series. The FIFA franchise continues to deliver cutting-edge innovation and serves as EA Sports' most recognized sports franchise, with more than 100 million copies sold to date. The Content In FIFA Is Developed Around The League Structure FIFA 23 features the complete current season of Major League Soccer. The engine also supports multiple competitions like the UEFA Champions League™, UEFA Europa League™, UEFA Super Cup™, UEFA Intertoto Cup, DFB Pokal, as well as the historic competition, the FIFA World Cup™. framerates for on-the-field action, more refined animations and smoother motion-capture. The team has improved visual fidelity and increased player count to capture the action and detail with unprecedented fidelity. The Game Engine & Match Engine The fundamental gameplay engine in FIFA 21 delivers the speed and responsiveness of a console game while pushing the gameplay features of a sports video game to the next level. The core gameplay engine provides the foundation and structure for all of our motion, emotion and visual detail. It is the core of FIFA's gameplay and includes the ball physics, soccer awareness, and player behavior. The FIFA team has added the Performance Intelligence System to deliver AI which is both reactive and predictive, allowing the game to react to player behavior, and predict when a player is likely to act. This allows the player to better anticipate and react to players to be the dominant force in the game. The Film Engine also drives the
