Even though the increasing popularity of smart devices has been pushing us to leave our desktop for a while, we should never forget the fact that it is still a source of useful information. With the help of some basic software packages, you may easily start using it as a powerful addition to your regular gadgets. Nowadays, we can mostly count on tablets, smartphones, and even smart watches for fulfilling that specific need. Still, a desktop is a computer. When it comes to power, there is no substitute for that, and if you have a tablet that is a pretty powerful machine, it is possible to turn the tablet into a more reliable PC. You just need to install the software package you want in order to successfully achieve that. However, you should always keep in mind that the installation process involves a lot of additional software that you may want to avoid or even uninstall later on. Still, it is well worth the effort because installing the software package you want involves several features that your current tablet does not offer. For example, you can transfer files between your tablet and desktop PC, and maybe you want to boot the computer from a DVD without the use of any additional hardware. b7e8fdf5c8
