I'm trying to detect whether the user have installed Qt 5.1.0, but not 5.2.0. I'm downloading the latest Qt version, and I want to know how to detect whether I'm running against a Qt 5.1.0 installation. I'm downloading Qt with the following commands: wget tar xvzf qt-5.1.0.tar.gz cd qt-5.1.0 ./configure Unfortunately, I can't find a way to detect if I'm installing against the 5.1.0 version. So I do not know how to distinguish between the following two commands: ./configure qt-5.1.0/config/first_run Also, a rebuild of Qt would solve the problem, but is it possible to detect if the user wants to update the installed version? A: I found a solution: This solution will not detect new releases, but it will work even if the user completely removes the installation folder: You will have to remove 6d1f23a050
