
Renault Scenic Df045 Fault 85

if you do have to buy a new sensor, the most important factor is that it is compatible with the scenic. the wiring harness should also be the same as the one that comes with the scenic. there are two types of sensors, the main sensor, that goes on top of the exhaust manifold and the secondary sensor, that goes in the engine. make sure the new sensor has a hole drilled on top for it to have the correct lead for the engine. some sensors have a hole which will match the hole drilled in the original sensor. check the new sensor for this by sticking a needle into it. if it fits, replace your old sensor with this new one. (adsbygoogle = window.adsbygoogle []).push({}); spanner fault warning light if the engine is overheating, this usually causes the engine head thermocouple to fail. usually the head thermocouple is located just above the top of the cylinder head, inside of the exhaust manifold. if the thermocouple fails, the engine may overheat due to a faulty head gasket or coolant leak. have your scenic checked by a renault technician. for a small repair, you may have to replace the head thermocouple, spark plug and reset the engine to bring it back to normal. the engine oil temperature sensor is usually located in the block of the engine next to the oil sump. it is used to monitor coolant temperature and stop the engine from overheating. if the engine oil temperature sensor is faulty, the engine may overheat. if the sensor fails, the engine overheat warning light may come on and the vehicle may overheat. you may have to replace the sensor.
