F3 provides a set of variables, mixins, and functions which can be used to tailor the F3 framework. THE ABSTRACT: This book was written with the intention of being a creative and educational guide for the web design community, as well as an exploration of the unique spectrum of design language. It will assist those looking to explore new ideas and techniques while also being a resource of established methods and strategies. It is intended to both educate and inspire! THE SOLUTION: My approach is based on the principles of design as a science. I believe that only through critical thinking and rigorous experimentation can we realize the potential of what is possible with design. Through a series of critical analyses, I've used my own research to create a clear system of processes that has resulted in greater understanding and ability to communicate. The result is a fresh, contemporary framework which holds great potential for communicating design philosophies in the digital age. THE IDEAL BUILD: I believe this book has value in that it provides a unique framework and toolset to assist in the process of design. I have included sections of code that you can copy and paste, comment, and manipulate to achieve the ultimate goal. My approach is to provide a system of processes that can be applied to any given project, regardless of the medium or scale. This system has been created to deal with the complexities of the web and make it possible to convey design in an effective and efficient manner. THE PURPOSE: If I could have one wish, it would be that this book could help you reach your creative potential as a designer. However, I have chosen to remain somewhat biased in the hope that I can inspire others to think about design differently. THE TECHNOLOGY: Because this book is based on the coding of a web page, I feel that a certain degree of internet experience is required in order to fully understand what is going on. I have included a number of resources within the book to assist those of you with less experience in the design process. THE PRODUCT: The design process is never static and there are always things to look out for in terms of the way the process is structured and how things are done. I have created a set of tools and techniques that can be used by anyone to communicate ideas, but also to refine these ideas into something that can be made real. FrameworkThree is a vertical rhythm CSS framework developed for various web development purposes. Feature List The focus of the framework is on size, flexibility, and readability The framework is developed with small, flat, vertical spacing, which gives it an aesthetic that is more spacious than other frameworks You can easily add extensions in the form of extensions to the Sass frameworks Main Features Size: Contains small and large vertical spacing rules to create "large," "medium," and "small" layout classes Support for IE8 and above Work great in mobile and desktop environments The framework uses a native, fluid grid system that allows for good readability across different screen sizes Customizable grid using Sass variables You can customize the grid to your design needs Diagnostics Suite FrameworkThree provides a set of debugging tools to indicate if websites meet design conventions, best practices, and industry standards. It's a set of guidelines that aims to ensure that websites meet common design conventions, best practices, and industry standards. These diagnostics are supercharged with the use of Sass variables, which makes it easier to customize the layout any number of ways. Typographic Vertical Rhythm (TVR) FrameworkThree is containin a vast number of rules for typography that create a real sense of rhythm to your website. These rules are designed to ensure that your web sites have a defined rhythm and rhythmic distribution of text. The Use of the term "Class" is a bit of a misnomer because it doesn't fully describe the usage of the element and no class or other identifying attributes are currently being assigned. As a general rule, tags used to define a page structure, are more correctly associated with a page element or a namespace:
