acasadosespiritossdownloadaddublado thank you for
replying.. give me time will reply.. i am from
england the experience is different here. That's
okay, I'll be around to help. The following user
gives a hug: Ghostly_Ghostly Thanks for taking
the time to read my post. I'm hoping I got it
right. If so, could you post your vLRS from the
flash drive. You might be able to get a better
idea of what's going on. I don't even know where
to begin. I'm not in a terribly good situation right
now and I'm trying to make the best of it. I did
the bks and drive scan, it was about 20gb long
and I was able to remove the virus. It was wiu
virus. I can type in the word excel, but when I hit
the enter button it doesn't work. I have a USB
drive with the vLRS on it so I'll have to take it
out and put it in the computer. I think I want to
get macromedia flash player. I have it installed. I
can go into the programs and go to media player
(or something like that). There are tons of titles
there for dvd's, vhs, and movies. But I can't seem

to open any of them. Is it supposed to work this way? Does this suggest that I have a virus? I think I remember someone who was trying to help with a virus of sorts a while back. Does the name EIGHT.U.PLUG.PHP appear in your browser's settings? I don't know what that is, but it might show up in your browser's settings. I tried installing it again just now. It seems to be working fine. Thanks for the help. I'll probably go through the whole thing and try to see if I can get this figured out. That's okay, I'll be around to help.
